SPECIFICATION

Type:	Ni-Cd Cylindrical Cell		
Model No.:	IPP-700AA		
Prepared:	CYL		
Approved:	LFX		
Date:	Nov 30, 2010

1. PREFACE

This specification applies to the Intec Nickel-Cadmium Cylindrical batteries or battery packs. Intec reserves the right to alter the product design or amend this specification without prior notice.

2. **TYPE**

This specification applies to the following sealed Nickel-Cadmium battery.

Type: <u>IPP-700AA</u>. Size: <u>AA</u>.

3. CHARACTERISTICS

★ Nominal voltage: <u>1.2 V</u>

★ Nominal capacity: 700 mAh(0.2C/5)

★ Standard charge: 70 mA×16h

★ Quick charge: $700 \text{ mA} \times 1.2\text{h}$, $(-\Delta \text{ V} = 10 \text{ mV})$

★ Trickle charge: 23~35 mA

 \bigstar Discharge cut-off voltage: 1.0 V/unit(20°C)

 \bigstar Max current of constant discharge: 5 A (20°C, unit cell)

★ Operating temperature range: (Max relative humidity: 85%)

Standard charge $+0 \sim +45^{\circ}\mathbb{C}$ Trickle charge $+10 \sim +45^{\circ}\mathbb{C}$ Fast charge $+10 \sim +45^{\circ}\mathbb{C}$ Discharge $-20 \sim +60^{\circ}\mathbb{C}$

★ Storage temperature range: (Max relative humidity: 85%)

Within two years $-20 \sim +30^{\circ}\text{C}$ Within two months $-20 \sim +40^{\circ}\text{C}$ Within one month $-20 \sim +50^{\circ}\text{C}$ Within one week $-20 \sim +60^{\circ}\text{C}$

4. **DIMENSION/WEIGHT**

- 4.1. Dimensions: $\Phi 13.8^{\pm 0.5} \times 48.0^{\pm 0.8}$ (mm);
- 4.2. Gross weight: 19 (g);

5. CELL PERFORMANCE

5.1. TEST REQUIREMENTS

The following conditions are for new batteries (within one month after delivery under the test method of 5.2.2).

Environmental Temperature: $+15 \sim +25^{\circ}\text{C}$; Relative humidity: $45\% \sim 85\%$.

Tel : (852) 2885 1100 Fax : (852) 2947 0588

5.2. TEST METHOD AND PERFORMANCES

5.2.1. APPEARANCE

The cell should be free from stretches, dents, dirt and rusts.

5.2.2. CAPACITY

Charge with 0.1C for 16 hours then discharge with 0.2C to the end-voltage <u>1.0</u> V/unit, the capacity shall be more than <u>700</u> mAh.

5.2.3. **OPEN-CIRCUIT VOLTAGE**

The open-circuit voltage within one hour after full charge shall be more than 1.25V/unit.

5.2.4. INTERNAL IMPEDENCE

Within one hour after full charge, the internal impedance shall be less than 28 m Ω /cell.

5.2.5. HIGH RATE DISCHARGE

The capacity shall be more than $\underline{630}$ mAh with the constant discharge current of $\underline{700}$ mA to the end voltage of $\underline{1.0}$ V/unit after the battery is fully charged.

5.2.6. **SELF-DISCHARGE**

The capacity shall be more than 490 mAh after the storage of 28 days for the fully charged battery.

5.2.7. **OVER-CHARGE I**

The battery shall not cause salting, leakage or reformation when charged at <u>70</u> mA for 48 hours and the capacity shall be more than 700 mAh.

5.2.8. **OVER DISCHARGE**

The battery shall not cause reformation when it is discharged for 24 hours with the external resistance at $0.5\ \Omega$.

5.2.9. LIFE-SPAN(CUSTOM)

The capacity shall be more than 490 mAh after 500 cycles with the test conditions as follow:

TEST CONDITION

Cycle-th	Charge	Rest	Discharge	
1	Charge at 0.1C/5 f or 16 hours	None	Discharge at 0.25C/5 for 2.33 h	
2 ~ 48	Charge at 0.25C/5 for 3.17 hours	None	Discharge at 0.25C/5 for 2.33 h	
49	Charge at 0.25C/5 for 3.17 hours	None	Discharge to 1.0V/unit	
50	Charge at 0.1C/5 for 16 hours	1 ~ 4 hours	Discharge at 0.2C/5 to 1.0V/unit

Tel : (852) 2885 1100 Fax : (852) 2947 0588

5.2.10. LIFE-SPAN(EXPRESS)

The battery shall supply 490 mAh at the 400th cycle under the conditions as follows.

Charge	$1C_5$ for 72 minutes (- Δ V= $\underline{10}$ mV)
Discharge	1C ₅ to1.0V/unit

5.2.11. **STORAGE**

Within 14 days, the battery shall not cause leakage at 30-60°C with the relative humidity at 75%-85%.

5.2.12. VIBRATION

The battery shall not cause damage to its performances when tested with the amplitude at 4 mm (0.158 inch) and the frequency at 1000Hz.

5.2.13. **DROP TEST**

The battery shall keep normal when dropped from a height of 450 mm (17.716 inch) to the wooden board.

5.2.14. SHORT CIRCUIT

The fully charged battery shall not explode when shorted directly by wires.

5.2.15. INCORRECT POLARITY CHARGE

The battery shall not explode when charged for 5 hours with the polarity being reverse.

5.2.16. OVER CHARGE II

The battery shall not explode when charged at 1C for 5 hours.

6. CAUTIONS

- A. The end-voltage is recommended at $1.0 \pm 0.1 \text{V/unit}$.
- B. The battery may go fail when shorted, over-charged or charged with incorrect polarity.
- C. Avoid soldering directly to the battery.
- D. Do not dispose of in fire and keep away from damage.

7. REFERENCE

Please refer to Intec's Customer Service if there is any question on using batteries.
